Video Game Clip Competitions

Team 01

He (Damon) Chen(Team Lead)
Kelvin Ching Kiu Chan(Front End)
Alex Chau(GitHub)
Steven Liao (Back End)
Chaoyi Ying (Front End)
Hugh Nguyen(Scrum Master)

Milestone 3

November 8 2021

1. UI and Functionality feedback

- Instructors comments on functionality
 - Asks about next step after voting on posts,
 - Asks about what features could complete the product
 - Wants to implement more features by milestone deadline
 - Thinks features are more complicated than others so maybe dumb it down a little, or make simple
 - **Specify MVP features**
 -
 - After voting for competition, she wants something to do after it is voted for
 - How to know who wins prize money
 - Answer: up to user configuration of competition
 - Example: 1st: 50%, 2nd 30%, 3rd 20%
- Instructor's comments on UI
 - **Very nice and professional**

2. Brief Review of coding, github, database

- **GitHub Policies**

- Branches are created for each person when they pull from dev, so each person will usually have their own branch
- Additional branches will also be created when testing needs to be done and needs to merge changes from other branches
-

- **Code Reviews**

- Code review is done as a group where the author will share their code and the views will share their thoughts on the code
- A major review item to check first and foremost is if the project works
-

3. Project status

- **Teamwork**

- Team meets are often daily, to work on the project
- Usually frontend lead and backend lead will meet to discuss what needs to be done
-

- **Risks**

- Our amazon ec2 performance might be lacking
 - Solution: refactor code so that our amazon ec2 production server would be able to handle our web app
- Our project might not be able to support large video files
 - Solution: look into resources to fix this problem
- There is a timezone issue where we must for group members being in different time zones
 - Solution: work asynchronously and find a suitable time for meetings
- We are not as proficient as we would like with our current software stack
 - Solution: reach out to developers with more experience for our software stack(other students, professors)

4. List of P1 features committed for delivery

Features implemented

- Users are able to create accounts
- Users are able to create posts (using a small video file around 1 MB and currently improving)
- Users are able to search for competitions
- Users are able to view posts under competitions

Features not implemented but will implement in the future

- Users will be able to login
- Users will be able to vote for competitions
- Users will be able to enter competitions using their own account and submit a post into it
- Users will be able to know which posts got the most votes after a competition is over
- Users whose post have the most votes will receive part of the prize pool (which will be web app specific points for the scope of this project)
